

Problem

Today the team jumps between Notion, spreadsheets, Stripe dashboards, and a legacy admin panel. That slows response times and creates inconsistent account notes.

Must-have features

1. Secure login with email/password and Google SSO
2. Role-based access: Admin, Success Manager, Viewer
3. Account list with search, filters (plan, health score, region), and pagination
4. Account detail page: overview, contacts, open tickets, recent activity timeline
5. Ticket inbox: create/assign/close tickets, priority, SLA due dates
6. Stripe webhook ingestion for payment failed / subscription canceled events
7. Basic audit log for sensitive actions (role changes, exports)
8. CSV export for accounts and tickets

Nice-to-have
